

WASTE2WORTH

— Industrial Symbiosis Platform for MSMEs —

Transforming Industrial Waste
into Business Value for MSMEs

PROBLEM IDENTIFIED

During our study of MSMEs and manufacturing industries, we identified that a large amount of industrial waste such as textile scraps, metal cuttings, plastic waste, packaging materials, wood residues, and food processing by-products is either sold at very low value or sent to landfills.

At the same time, nearby industries purchase similar materials as raw inputs at significantly higher costs.

OUR PROPOSED SOLUTION

Waste2Worth aims to bridge this gap by connecting waste-generating MSMEs with industries that can reuse these materials as valuable resources, creating a sustainable and economically beneficial circular manufacturing ecosystem.

Intelligent material matching

Nearby MSME recommendations

Resource exchange and collaboration

Cost reduction and revenue generation

Circular economy adoption

OUR VISION

To build a future where industrial waste is no longer treated as a disposal problem but becomes a valuable resource that strengthens MSMEs, reduces costs, and promotes sustainable manufacturing.

KEY OUTCOMES

Lower
Disposal Costs

Lower Raw
Material Costs

Additional
Revenue

Sustainable
Future

“One MSME's waste
can become another
MSME's **opportunity**. ”

One **Generates**

We **Connect**

Another **Benefits**

HIGH LEVEL ARCHITECTURE

WASTE2WORTH

Industrial Symbiosis Platform for MSMEs

DETAILED WORKFLOW

Waste2Worth enables MSMEs to turn waste into wealth by connecting the right businesses for a sustainable and profitable future.

IMPACT & VALUE CREATION FRAMEWORK

Waste2Worth enables MSMEs to convert industrial waste into valuable resources by connecting the right businesses. This creates economic value, strengthens industries and drives a sustainable circular economy.

STAKEHOLDER BENEFITS

WASTE PRODUCER (MSME)

- Generates additional revenue
- Reduces waste disposal cost
- Improves resource efficiency
- Enhances brand image

WASTE CONSUMER (MSME)

- Access to low-cost raw materials
- Stable and reliable material supply
- Reduced production cost
- Improved competitiveness

MSME ECOSYSTEM

- Stronger industrial collaboration
- Development of local supply chains
- Knowledge and resource sharing
- Boosts overall MSME growth

ENVIRONMENT

- Reduces landfill waste
- Lowers pollution and emissions
- Conserves natural resources
- Promotes circular economy

ECONOMY & SOCIETY

- Resource optimization
- Job creation & local opportunities
- Supports sustainable development
- Strengthens Atmanirbhar Bharat

VALUE CREATION CYCLE

KEY IMPACT AREAS

ECONOMIC IMPACT

- Lower disposal costs
- Reduced raw material costs
- Additional revenue streams
- Higher profitability

ENVIRONMENTAL IMPACT

- Less waste to landfill
- Reduced carbon footprint
- Lower pollution
- Resource conservation

SOCIAL IMPACT

- Strengthened MSME network
- Local employment generation
- Community development
- Awareness on sustainability

INDUSTRIAL IMPACT

- Efficient resource utilization
- Improved operational efficiency
- Innovation in material use
- Resilient supply chains

MEASURABLE OUTCOMES

20 – 40%
Reduction in Disposal Costs

10 – 30%
Reduction in Raw Material Cost

15 – 25%
Increase in Revenue Potential

25 – 50%
Waste Diversion from Landfill

20 – 35%
Reduction in Carbon Footprint

Stronger
MSME Collaboration & Local Economy

VISION

To build a self-sustaining industrial ecosystem where no waste is wasted and every MSME grows together towards a greener and prosperous future.

WASTE2WORTH

Industrial Symbiosis Platform for MSMEs

BEFORE WASTE2WORTH

✗ Traditional Waste Management

Challenges faced by MSMEs

	High Waste Disposal Cost	COST ↑ HIGH
	High Raw Material Cost	COST ↑ HIGH
	Poor Resource Utilization	UTILIZATION ↓ LOW
	No Revenue from Waste	REVENUE = ₹0
	High Environmental Impact	IMPACT ↑ HIGH
	Limited Collaboration	COLLABORATION = LIMITED

Valuable materials are wasted, costs are high, and opportunities are lost.

AFTER WASTE2WORTH

✓ Waste2Worth Enabled Ecosystem

Benefits for MSMEs

	Lower Waste Disposal Cost	COST ↓ LOW
	Lower Raw Material Cost	COST ↓ REDUCED
	Better Resource Utilization	UTILIZATION ↑ HIGH
	Additional Revenue from Waste	REVENUE ↑ HIGH
	Reduced Environmental Impact	IMPACT ↓ LOW
	Strong MSME Collaboration	COLLABORATION = STRONG

★ Waste becomes wealth, costs are reduced, and sustainable growth is achieved.

Waste2Worth connects the right MSMEs, converts waste into valuable resources, and drives economic, environmental, and social benefits for a sustainable future.

CONCLUSION

Waste2Worth transforms industrial waste from a disposal challenge into a business opportunity by enabling collaboration between MSMEs and promoting circular resource utilization.

EXPECTED OUTCOMES

Lower waste disposal costs

Reduced raw material expenses

Additional revenue opportunities

Stronger industrial collaboration

Reduced environmental impact

Circular economy adoption

OUR VISION

To build a future where industrial waste is no longer treated as a disposal problem but becomes a valuable resource that strengthens MSMEs, reduces costs, and promotes sustainable manufacturing.
